# Class presentation

AP

# A new[ish] module

- Designed for MSc Data Science students
- Contents carefully dovetail with existing MSc DS modules
- assessment continuously changes to adapt to rates of GenAI adoption

# A new[ish] module

- Designed for MSc Data Science students
- Contents carefully dovetail with existing MSc DS modules
- assessment continuously changes to adapt to rates of GenAI adoption

we are in this together

# Main topics

- Python modules for Data Science, e.g., `Matplotlib`
- the geometric view of multidimensional data
- the data-as-network view (graph algo.)
- the information-theoretic view, eg, text-as-data
- a motivating DS problem: sports ranking
- selected topics: matrix *slicing:* finding latent dimensions to datasets.
- [discontinued: exponentially-distributed data]

# Important aspects

The inevitable *overfitting* to MSc DS may make this module less appealing to MSc ACT students than the title suggests

# Important aspects

The inevitable *overfitting* to MSc DS may make this module less appealing to MSc ACT students than the title suggests

Machine Learning topics are selected so as not to overlap the essential Machine Learning and Applied ML modules.

The table of contents is varied and may appear syncretic wrt. traditional, textbook-based modules..

The table of contents is varied and may appear syncretic wrt. traditional, textbook-based modules..

This is a *final* module in charge of synthesizing a large, fast-moving area.

The table of contents is varied and may appear syncretic wrt. traditional, textbook-based modules..

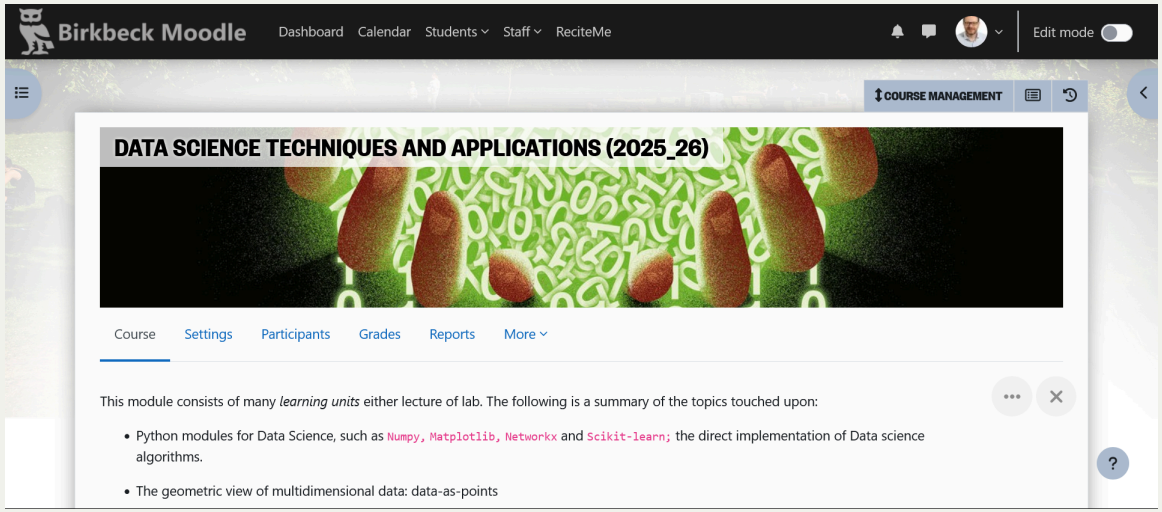
This is a *final* module in charge of synthesizing a large, fast-moving area.

so, units will be more ‘seminar’ than lecture.

# Organization

# Online

## Standard Moodle/Teams provision



Please check your email and MyBirkbeck calendar for (unlikely) time/place amendments.

Extra: if you are familiar with the Markdown presentation language and the GitHub software repository you can sync materials as they get updated

# Please see your

- PG admins, Yeti Wang or Michael Bennett, for support in navigating school: cs-pg@bbk.ac.uk

# Please see your

- TAs, Dr. Ying Li or Paschalis Lagias, for support with lab experience

# and finally, see your

- module coordinator, Alessandro, about the study materials and general *'meaning of life'* questions

# Too many e-mails

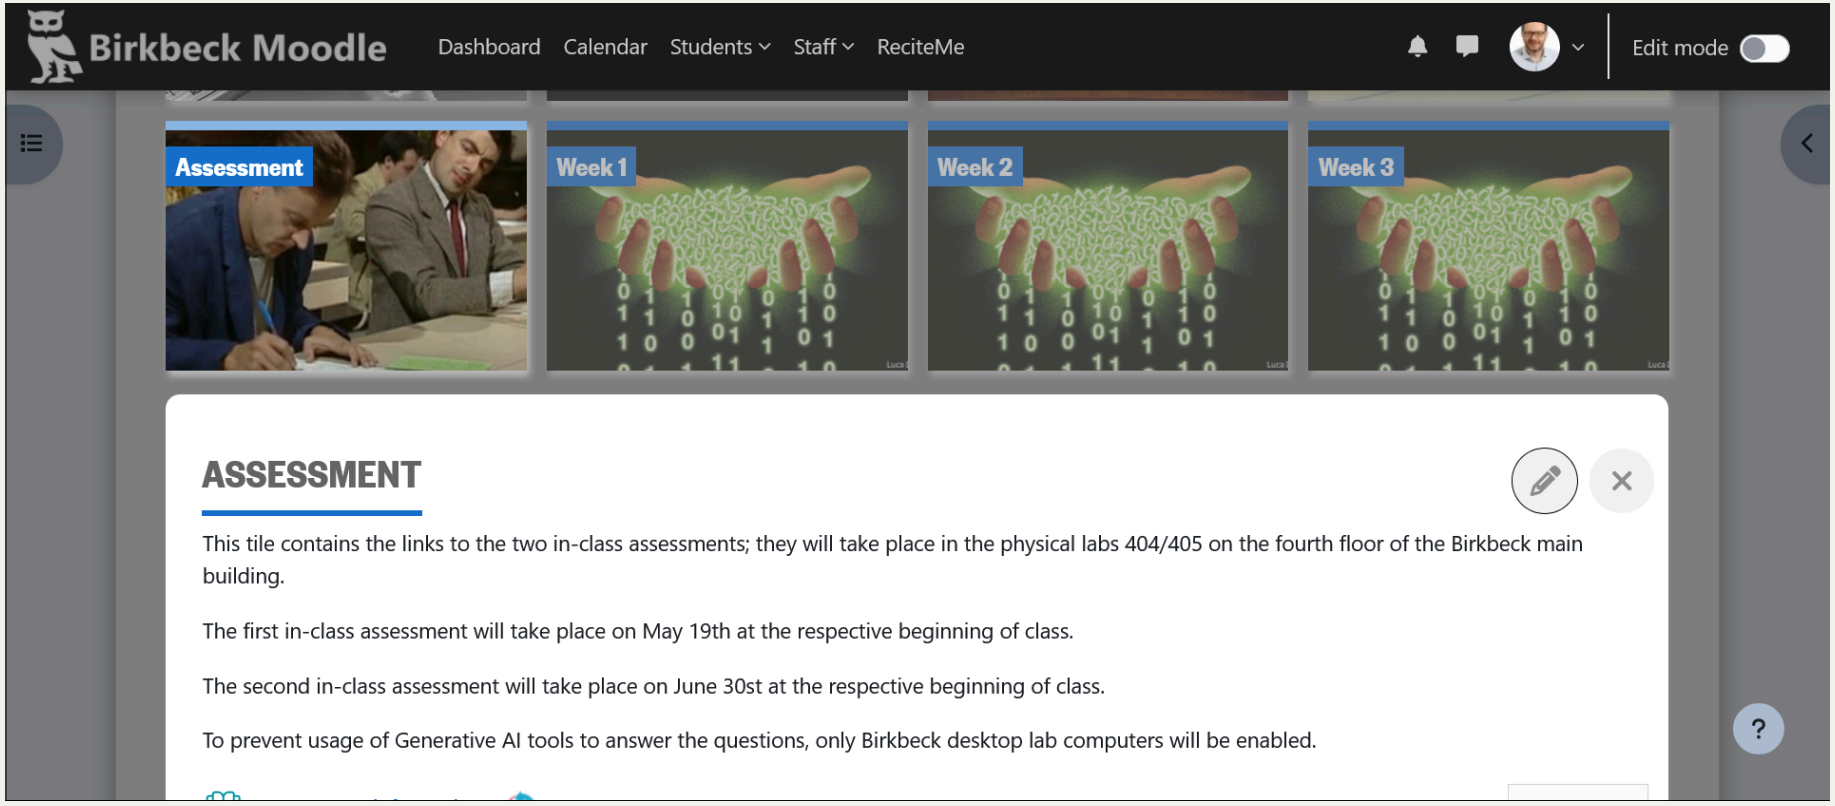
Your feedback and questions are always welcome.

Help avoiding inbox overflow by please contacting us via MS Teams or Moodle class forum

# Assessment

Each week a Moodle quiz appears in the respective Week tile.

For assessment, Moodle quizzes appear/disappear also from the Assessment tile:



Birkbeck Moodle
Dashboard
Calendar
Students
Staff
ReciteMe
Edit mode
Assessment
Week 1
Week 2
Week 3
ASSESSMENT
This tile contains the links to the two in-class assessments; they will take place in the physical labs 404/405 on the fourth floor of the Birkbeck main building.
The first in-class assessment will take place on May 19th at the respective beginning of class.
The second in-class assessment will take place on June 30st at the respective beginning of class.
To prevent usage of Generative AI tools to answer the questions, only Birkbeck desktop lab computers will be enabled.

# Past trends

DSTA marks in 2024-25:

| | **Min** | **Avg.** | **Max** |
|---|---|---|---|
| Cours. | 40 | 64.24 | 100 |
| Final | 30 | 66.64 | 100 |
| Aggr. | 36 | 66.16 | 100 |

High probability of success 🍀

# Coursework

For the second time, coursework will take the form of an in-class, multiple-choice Moodle quiz

Please see the details under the ‘Assessment’ tile on Moodle.

In view of the novelty of the approach, marks will be awarded generously, but always at the discretion of the School’s Exam board.

# Final test

For the second time, the final test will take the form of an in-class, multiple-choice Moodle quiz.

Please see the details under the ‘Assessment’ tile on Moodle.

In view of the novelty of the approach …
