Class presentation

AP

A new[ish] module

- Designed for MSc Data Science students
- Contents carefully dovetail with existing MSc DS modules
- assessment continuously changes to adapt to rates of GenAI adoption

A new[ish] module

- Designed for MSc Data Science students
- Contents carefully dovetail with existing MSc DS modules
- assessment continuously changes to adapt to rates of GenAI adoption

we are in this together

Main topics

- Python modules for Data Science, e.g., `Matplotlib`
- the geometric view of multidimensional data
- the data-as-network view (graph algo.)
- the information-theoretic view, eg, text-as-data
- a motivating DS problem: sports ranking
- selected topics: matrix *slicing:* finding latent dimensions to datasets.
- [discontinued: exponentially-distributed data]

Important aspects

The inevitable *overfitting* to MSc DS may make this module less appealing to MSc ACT students than the title suggests

Important aspects

The inevitable *overfitting* to MSc DS may make this module less appealing to MSc ACT students than the title suggests

Machine Learning topics are selected so as not to overlap the essential Machine Learning and Applied ML modules.

The table of contents is varied and may appear syncretic wrt. traditional, textbook-based modules..

The table of contents is varied and may appear syncretic wrt. traditional, textbook-based modules..

This is a *final* module in charge of synthesizing a large, fast-moving area.

The table of contents is varied and may appear syncretic wrt. traditional, textbook-based modules..

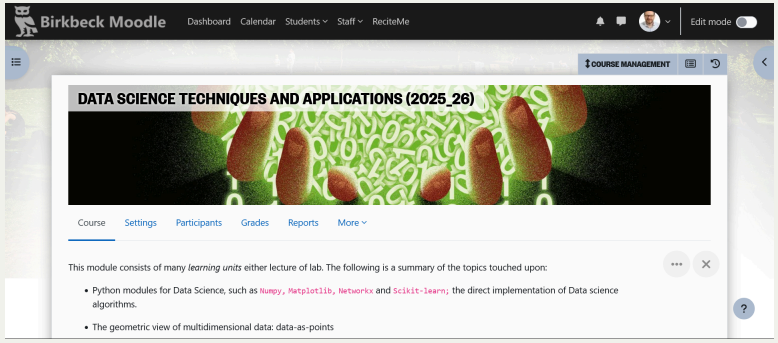
This is a *final* module in charge of synthesizing a large, fast-moving area.

so, units will be more ‘seminar’ than lecture.

Organization

Online

Standard Moodle/Teams provision



Please check your email and MyBirkbeck calendar for (unlikely) time/place changes.

Extra: if familiar with Markdown+GitHub, you can sync materials as they get updated

Please see your

- PG admins, Yeti Wang or Michael Bennett, for support in navigating school: cs-pg@bbk.ac.uk

Please see your

- TAs, Dr. Ying Li or Paschalis Lagias, for support with lab experience

and finally, see your

- module coordinator, Alessandro, about the study materials and general *'meaning of life'* questions

Too many e-mails

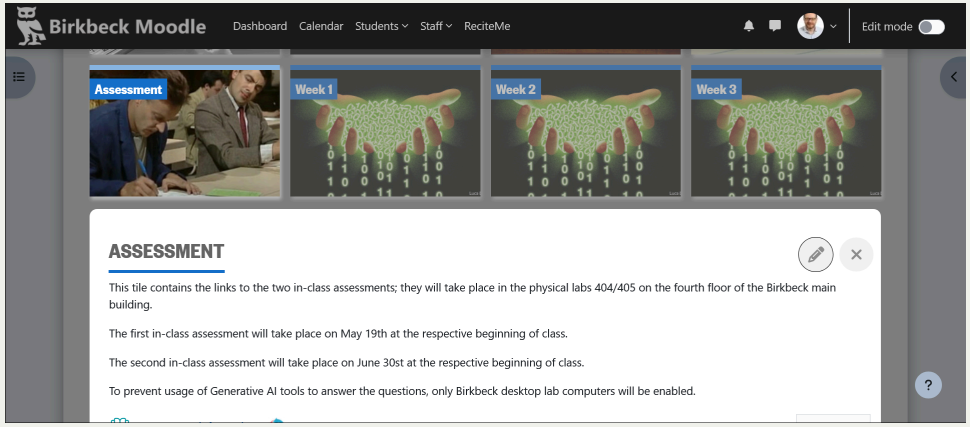
Your feedback and questions are always welcome.

Help avoiding inbox overflow by please contacting us via MS Teams or Moodle class forum

Assessment

Each week, a practice Moodle quiz appears in the respective Week tile.

For assessment, Moodle quizzes appear/disappear from the Assessment tile:



Past trends

DSTA marks in 2024-25:

	Min	**Avg.**	**Max**
Cours.	40	64.24	100
Final	30	66.64	100
Aggr.	36	66.16	100

High probability of success 🍀

Coursework

For the second time, coursework will take the form of an in-class, multiple-choice Moodle quiz

Please see the details under the ‘Assessment’ tile on Moodle.

In view of the novelty of the approach, marks will be awarded generously, but always at the discretion of the School’s Exam board.

Final test

For the second time, the final test will take the form of an in-class, multiple-choice Moodle quiz.

Please see the details under the ‘Assessment’ tile on Moodle.

In view of the novelty of the approach …
